

## Reef Salt

### Data sheet (description)

Reef Salt is a dynamic new formulation, specifically designed for the needs of the modern reef aquaria. Reef Salt is blended from chemically pure raw materials, continuously quality controlled, achieves elevated levels of calcium and alkalinity reserve without resorting to harmful chelating agents, contains all the essential trace elements and enhanced levels of Strontium and Iodine, dissolves easily without leaving residue.

Typical data with a salinity of 35‰:  
(technical data, not specification)

Element	Symbol	mg/l
Natrium	Na	~ 11000
Magnesium	Mg	~ 1200
Calcium	Ca	~ 420
Kalium	K	~ 350
Chloride	Cl <sup>-</sup>	~ 19700
Sulfate	SO <sub>4</sub> <sup>2-</sup>	~ 2200
Carbonate	HCO <sub>3</sub> <sup>-</sup> /CO <sub>3</sub> <sup>2-</sup>	~ 180
Strontium	Sr	~ 16

### Dissolving Aqua Medic Reef Salt:

For a salinity of 35 ‰, requires around 38 g of Reef Salt dissolved in one liter of water. It is recommended to use osmosis water since turbidity can occur in tap water in hard water areas. Always put the salt into the water, never the other way round, as it can lead to insolubility by over-saturation. As soon as the mixed solution is clear, the saltwater can be added directly to the aquarium if used for small water changes (up to about 10%). In case of a new set-up or larger water changes (up to 50% is possible) the water obtained should be aerated for 24 hours to stabilize the pH value.
